## EDUCATION

### University of Florida

*Bachelor of Science in Computer Science*

Gainesville, FL

Aug 2021 – May 2025

## EXPERIENCE

### Baidu, Inc.(China's #1 search engine)

May 2024 – Aug 2024

*Software Engineer Intern*

*Shenzhen, China*

- Designed internal tools to streamline Qianfan LLM integration and **accelerate developer onboarding across multiple engineering teams**.
- Developed a high-performance API proxy using Python + Express.js to centralize and secure Qianfan API authentication across frontend clients, **reducing latency by 20%**, leading to smoother onboarding and faster dev iteration on LLM-powered features.
- Built a **LangChain.js + Puppeteer** pipeline to automatically ingest and embed technical documentation into ChromaDB, enabling semantic search capabilities used by engineers to test prompt quality and speed up LLM feature development — **improving embedding throughput by 15%, and reducing prompt iteration time for developers**.
- Implemented end-to-end test automation for OCR, LLM streaming, and embedding workflows using Jest and Jenkins CI, increasing deployment stability and catching critical regressions early.
- Collaborated cross-functionally with infra, SDK, and dev tooling teams to ensure alignment on proxy deployment, testing coverage, and embedding performance across environments.

### QuickFollowUp – AI-Powered Chrome Extension for Job Seekers

May 2025 – Present

*Software Engineer*

*Gainesville, Florida*

- Built and launched a full-stack assistant to automate job application follow-ups using a Chrome extension frontend and FastAPI backend, helping job seekers streamline recruiter outreach and reduce burnout. Used by **200+ beta users**, with **80% reporting faster outreach** and improved recruiter response rates.
- Engineered an async AI pipeline with LangGraph and OpenAI, parsing job descriptions and resumes to generate personalized, **context-aware messages in under 3 seconds per request**.
- Created a dynamic recruiter discovery system combining Hunter.io API and Gmail API with a custom Chrome DOM parser to identify DM-able recruiters — reducing manual search time by **60%** and boosting outreach efficiency and message conversion.
- Implemented rate limiting with Redis and scoped JWT authentication, securing API access, enforcing daily quotas, and preventing abuse across extension clients.
- Integrated Supabase for user auth and session tracking; shipped production-ready caching and UI logic to ensure fast client-side rendering and **reduced API load by 35%**, improving extension responsiveness under active user traffic.

## PROJECTS

### AI Wellness Assistant for Product Support

Feb 2025 – May 2025

- Developed an AI chatbot to support product onboarding and internal troubleshooting for a fast-scaling startup, reducing manual support load and response time.
- Engineered an **LLM routing system** using **LangGraph** to handle product, support, and symptom-related queries with dynamic flow control.
- Embedded 100+ internal product docs into **ChromaDB** using **HuggingFace** embeddings, enabling accurate **RAG-based retrieval** for context-aware answers.
- Built a real-time assistant with a **FastAPI + Ollama backend** and **React frontend**, supporting seamless mode-switching between technical and non-technical queries.

### YOMI | Japanese Learning Website

Jan 2025 – Mar 2025

- Built a full-stack learning platform with **React**, **TypeScript**, and **Supabase** (PostgreSQL + Google OAuth); deployed on **Vercel**.
- Developed an interactive quiz game with **Playwright** to generate personalized learning paths.
- Designed a real-time leaderboard powered by **SQL triggers** and a normalized schema with transaction-safe logic to ensure data consistency.
